

1. Framework on the use of GenAI CMPG213 / 223 - Systems Analysis and Design I & II

1.1 Standards

- a. AI should augment learning through serving as a
 - brainstorm partner to enhance innovation,
 - critic to verify aspects of work completed and
 - assistant to do tedious tasks such as language editing
- b. A marking guide or specific instructions regarding an assignment or assessment will explicitly indicate for which aspects of an assignment or assessment AI-assistance are allowed.
- c. If not explicitly indicated, the use of AI to generate content for an aspect of an assignment or assessment will be considered plagiarism and if proven true be penalised according to the marking guide.
- d. Only free AI tools are allowed to be used.

1.2 Protocols

- a. A marking guide or specific instructions will explicitly indicate where AI-assistance is allowed, if any.
- b. For all use of AI, the following mandatory content must be handed in with assignments or assessments:
 - the tools and versions used
 - all prompts and responses received, in chronological sequence,
 - all versions of content, in chronological sequence, and
 - proof of how responses were/ verified.
- c. Students are not allowed to upload proprietary content or personally identifiable information of themselves, peers, or staff into public AI models.
- d. Students might be required to make a presentation or answer questions regarding content that involved the use of AI for which they will receive marks.
- e. AI literacy training is needed for example to teach students how to write effective prompts, help them understand AI bias, hallucination, need for verification, etc. Maybe presented across modules?

1.3 Accountability

Student Accountability responds to Lecturer verification, escalates to AIITSA

Student Accountability

- Responsible for adherence to marking guides or instructions regarding AI usage during assignments and assessments.
- Responsible for the accuracy of submissions and acceptance of marks rewarded for the quality of work submitted.

- The handing in of all mandatory content for AI use with assignments or assessments as stipulated in the protocol: the tools and versions used; all prompts and responses received, in chronological sequence; all versions of content, in chronological sequence; and proof of how responses were verified.
- The completion of a signed digital statement that accompanies assignments and assessments confirming that AI was used as specified in the marking guide or instructions.
- Even where AI is allowed, students must still be able to explain, justify, and take responsibility for the submitted work

Lecturer Accountability

- Responsible for compiling and communicating clear marking guides and instructions that explicitly stipulate the use of AI for assignments and assessments and the consequences of not adhering to the stipulated requirements.
- Audit the use of AI for assignments and assessments (student's version history): the tools and their versions used, the prompts and responses received against the versions of content submitted.
- Marking presentations or answers to questions regarding content that involved the use of AI.
- Escalate suspected cases of misconduct to AIITSA for formal investigation.
- Evaluate, review and update this framework at the end of every semester.
